

ABSTRACT OF THE DISCLOSURE

A method, system, and apparatus for incorporating a database-enabled server into a wireless network. The method includes the steps of receiving, at the wireless gateway, a communication message from a first communication network, the communication message including address information associated with a subscriber; storing, by the wireless gateway, the communication message, the communication message being stored in association with the subscriber; and selectively sending, with the wireless gateway using the wireless communication network, at least a portion of the communication message to a wireless device.
